

## CUSTOMER TESTIMONIAL

### Mercado Medic 6100

Steve Abbott works at a multinational engineering company and found that mobility in the office was a problem. The company approached Fast Aid Medical and Mobility in order to find a solution to give him better functionality in work. After an assessment with one of our Product Specialists the Mercado Medic 6100 was deemed to be the best chair for the job.

Steve has given us a detailed appraisal of the chair:

*The chair is very manoeuvrable, easy to use and comfortable. Prior to the chair I moved about the office on two elbow crutches and had a work space that was very self-contained. It took pre planning to get to meetings as all papers, folders etc had to be carried by others. The main printers were out of my functional ability, due to the fact that they were too far and I was unable to carry printed documents. The chair has totally liberated me and given me freedom to move around the office. I no longer require people to carry papers for me to meetings, get me refreshments or bring food from the canteen. I now have the mobility to go to the canteen myself and to move around the office in safety. Besides mobility which is brilliant, the chair gives me a function to raise the seat so that I can address people on equal terms and eye level and a tilt function which allows be to sit in the correct position at my desk.*

*The only down side of the chair is it does not have a cup holder. Being a professional chartered design engineer I can honestly say the chair is well built, easy to use and functional and there is no measure of how much the chair has changed my working life and how others perceive me. - Steve Abbott, Professional Chartered Design Engineer*
